TOKERR

WHITEPAPER

Making DeFi Safer

March 2023

Tokerr is the one-stop ecosystem carefully designed to create safety, security and accessibility for DeFi investors and developers.

About Tokerr

Tokerr is a comprehensive ecosystem designed to make DeFi safe and accessible for investors and developers, by building innovative solutions to existing DeFi problems. All the Tokerr utilities and DApps have been carefully envisioned, prioritising investors as well as developers, and trying to fix unique problems that plague DeFi, from the ground up.

The goal is to give users of Tokerr products access to an environment in which they can invest with peace of mind and the knowledge that their investments are safe from scams. At the same time, Tokerr is also a platform that developers can use to build projects, knowing that they begin with the assurance of safety for potential investors.

started: September 2022

✳ Token Scams

We know that some of the biggest memecoins that have created millionaires started off as small launches. But, investing in this space carries a huge risk due to the anonymity of the developers and the team, and there being a lack of control on the developers and the contracts they might create.

Different types of scams

- Hidden blacklist function
- Unverified contracts
- Proxy contracts
- Unlocked token rugpull
- Mint function rugpull
- Fee manipulation honeypot
- Developers sniping their own launches

Navigating DeFi
The barriers

Lack of Tools & Resources

What DeFi lacks, is widespread access to powerful and intuitive tools and resources for investors and developers. This is a barrier for investors to be able to make quick decisions in a fast market, and for developers and teams to run projects with ease. This only tends to widen the trust gap between investors and developers, unfortunately creating more failed projects.
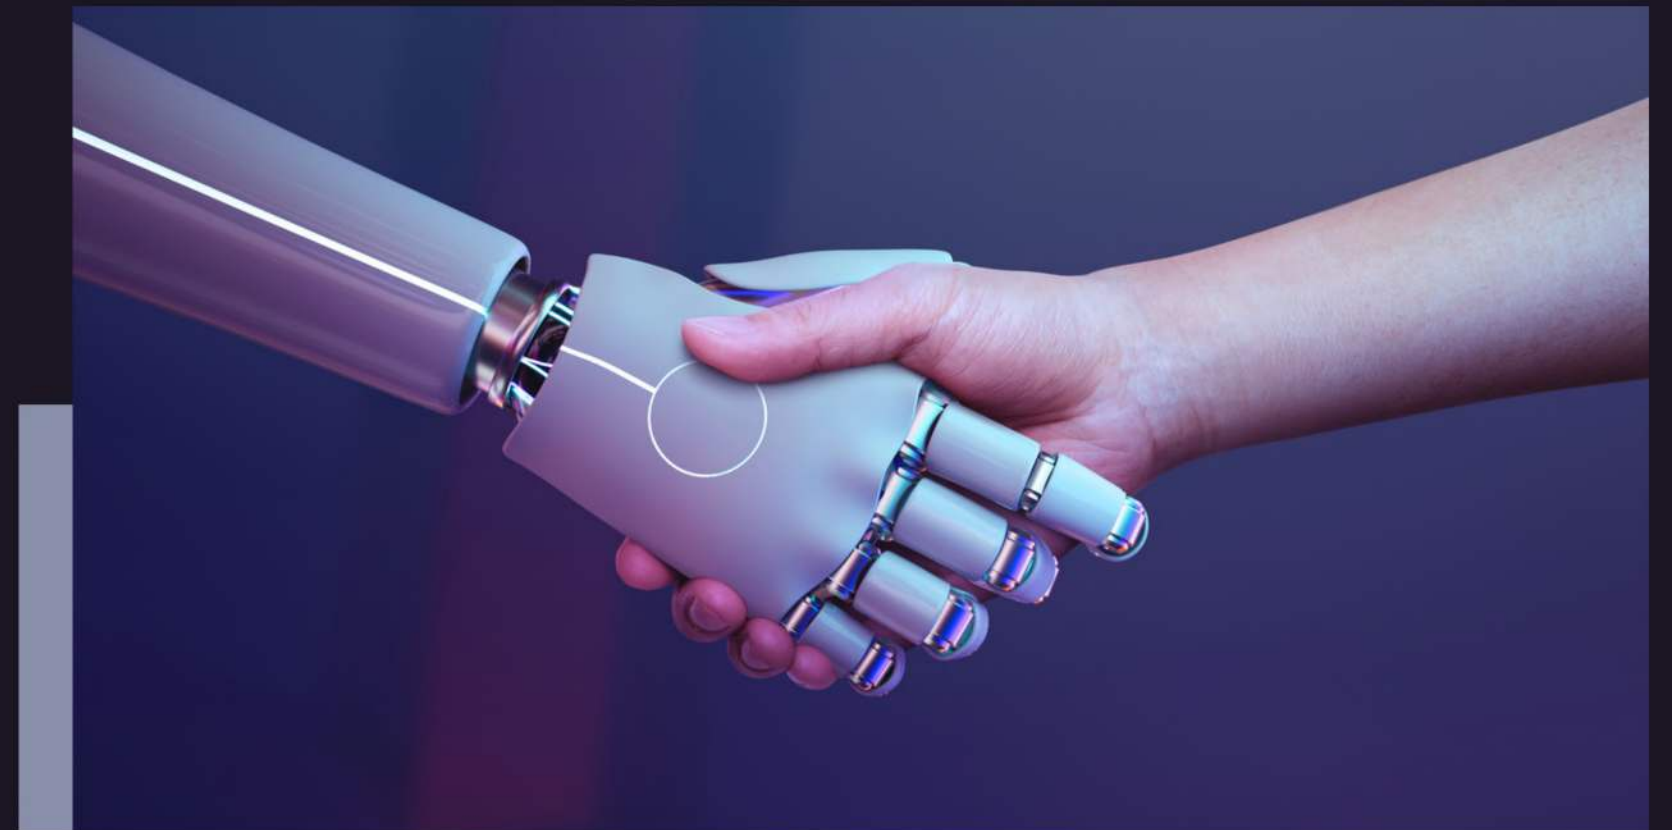

Difficulty in Collaborative Building

Although there are a number of strong, innovative and successful projects in the market, there are many promising ones that have failed due to a lack of expert coordination – with teams sometimes lacking crucial elements for success. An individualistic attitude due to the freedom of decentralization often holds back many potential (and often innovative) ideas from achieving their full potential. This is, in part, due to the lack of a true, live collaborative space.

No Singular Platform

As of 2022, estimated global crypto ownership rates are an average of 4.2%, with over 320 million crypto users worldwide; with this number predicted to be over 1 billion by 2030. As crypto adoption continues to grow at an incredible pace, there are new investors entering the space daily. Simultaneously, blockchain technology itself is constantly evolving due to innovation.

The lack of a singular, easy trading platform can leave DeFi investors, both new and old, often feeling lost, in a space with a large number of chains, with hundreds of new tokens being launched each day.

Tokerr Ecosystem

The solution

safety

security

accessibility

Over the past year, there has been a drastic drop in transaction volume on Ethereum and Binance Smart Chain – the two leading chains in volume. Although the market has been in a bear phase, a huge influx of unscrupulous developers, dishonest teams and a lack of control in the hands of investors has also played a big part in this – with many investors left feeling helpless in a sea of scams.

The Tokerr ecosystem has been envisioned keeping in mind all the problems preventing new investors from entering the DeFi space, and driving away many older investors too.

Tokerr Deployer

The Tokerr Deployer is an easy-to-use multichain telegram bot and DApp through which users with even little or no experience of coding can launch tokens within minutes, on multiple chains. The contracts launched are hard-coded with safety features so that developers cannot add any malicious functions or create any malicious code.
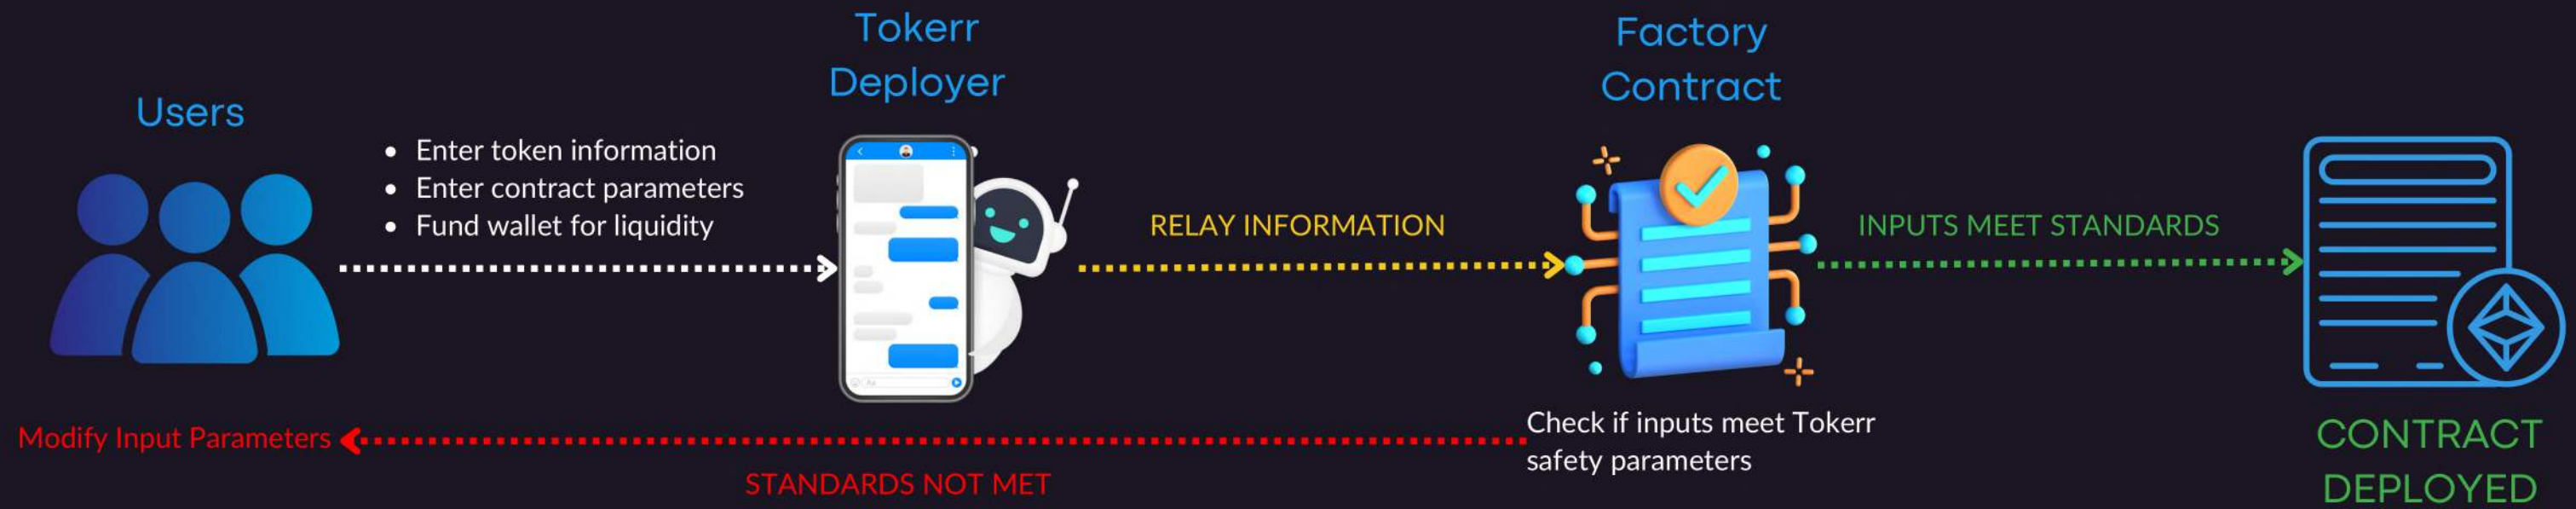

Safety Features:

- No proxy contract
- Contract verified immediately on deployment
- Liquidity locked as soon as token is live/option to burn
- Maximum taxes cannot be increased beyond a preset amount
- No honeypot functions
- No liquidity pull functions
- No mint functions
- Minimum supply lock
- Preset minimum lock time

tokens deployed: 350+

Tokerr Tools

Tokerr Tools is a suite of essentials designed to provide DeFi investors with the necessary powerful tools to be able to act quickly on investment decisions; as well as tools for developers to create a safer environment for investors, thus increasing trust and reliability.

bridge volume: $200k+

lockerr live: Q1 2023

holderr live: Q1 2023

more tools coming...

✳ Tokerr Bridge

Tokerr Bridge allows users to quickly bridge native tokens between multiple chains without needing to connect their wallets, hence protecting them from wallet phishing or other exploits.

✳ Lockerr

A multichain, safe, liquidity locker with a verified locker contract, not hidden behind any proxies. The Tokerr Locker is completely secure and very affordable.

*Image is a UI design for representation purposes only. The final product will be nearly identical.

✳ Holderr

A DApp which allows developers to have further security and selectivity for their communites, and create groups that limit access to only holders or whales.

*Image is a UI design for representation purposes only. The final product will be nearly identical

Tokerr Fund

A profit-sharing system that rewards people for holding Tokerr. Rather than a staking system which tends to often be unsustainable in the long run since staking usually either rewards holders in native tokens which are often sold, affecting the project, or the contract needs to sell the native tokens to rewards holders in stable coins or other crypto.

The Tokerr Fund system automatically accumulates 30% of the income accumulated from the entire Tokerr Ecosystem (including all upcoming utilites), and regularly distributes it amongst holders who stake their tokens on the Stakerr platform, based on their staked amount.

Features:
- Payouts are independent of the performance of $TOKR, and only dependent on the adoption of Tokerr utilities
- Rewards from staking do not affect the TOKR chart
- Unlike staking, profit-sharing rewards do not reduce with more holders, but only increase with more Tokerr adoption

Tokerr DEX

Most charting tools and DApps feel incomplete in some way, with some DApps having features that others are lacking, and vice versa. This has caused investors to need to use a multitude of DApps and tools just to keep track of their investments across various chains - often resulting in inefficient trading. In fact, the largest chain by volume, Ethereum, completely lacks a high quality charting DApp.

TokerrDEX changes all this by providing users with an intuitive, modular, all-in one, multichain charting DApp.

expected: Q4 2023

DEX Breakdown

Smart Buy
A sniper-like smart buy module that gives user much more control over their trading.

Contract Scanner
A simple, customizable wallet aggregator, that allows investors to easily keep track of their investments across chains

Wallet Aggregator
A simple, customizable wallet aggregator, that allows investors to easily keep track of their investments arcoss chains

Token Info
All the information that you would need to know before investing in any token

fully customizable interface

mix-and-match various modules for your ideal trading experience

Social Module
Token announcements and a live chat - right within the DEX. Never miss a single update
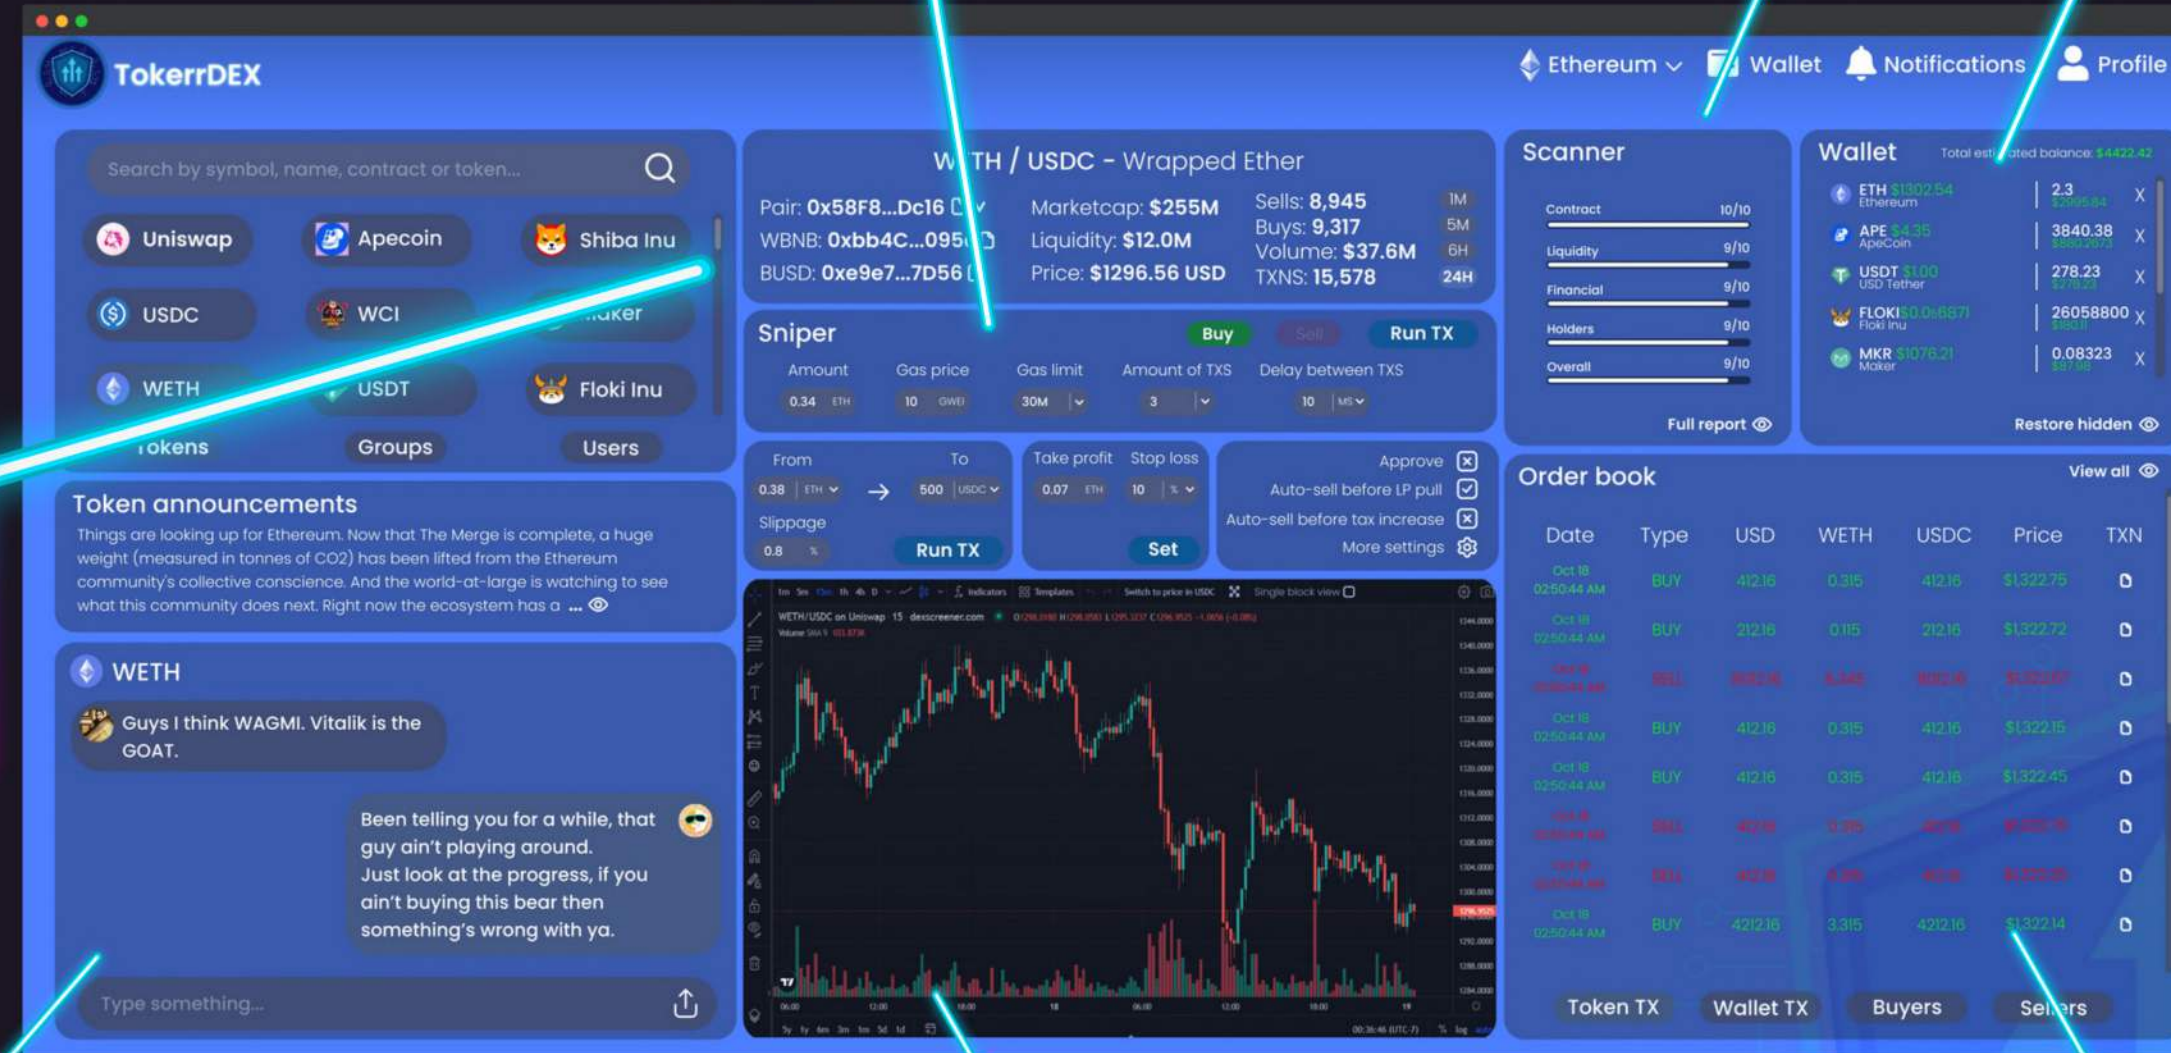

Comprehensive Chart
A detailed chart, with varied intervals and all the necessary setting and tools for technical analysis

Detailed Order Book
A detailed and expandable order book

Tokerr Lab

A "decentralized collaboration laboratory", where ideas can be shared and worked on live, like a hive mind. More than providing just a forum for exchange of ideas, TokerrLab allows users to actually connect with each other and collaborate in real time.

Modules:

- **Create:** Creators can post project briefs and requirements for collaborator applications.
- **Collaborate:** People from all fields can apply for open creator projects, and projects can be worked on simultaneously by multiple people from around the world with all the necessary planning tools.
- **Crowdfund:** TokerrLab will host a native, milestone-based crowdfunding platform for upcoming projects.
- **Learn:** A module where educators can create and post detailed educational courses on crypto, for purchase.
- **Idea Vault:** People with great DeFI ideas can store them in the Idea Vault and earn royalties when an idea is purchased for use by a team or developer.
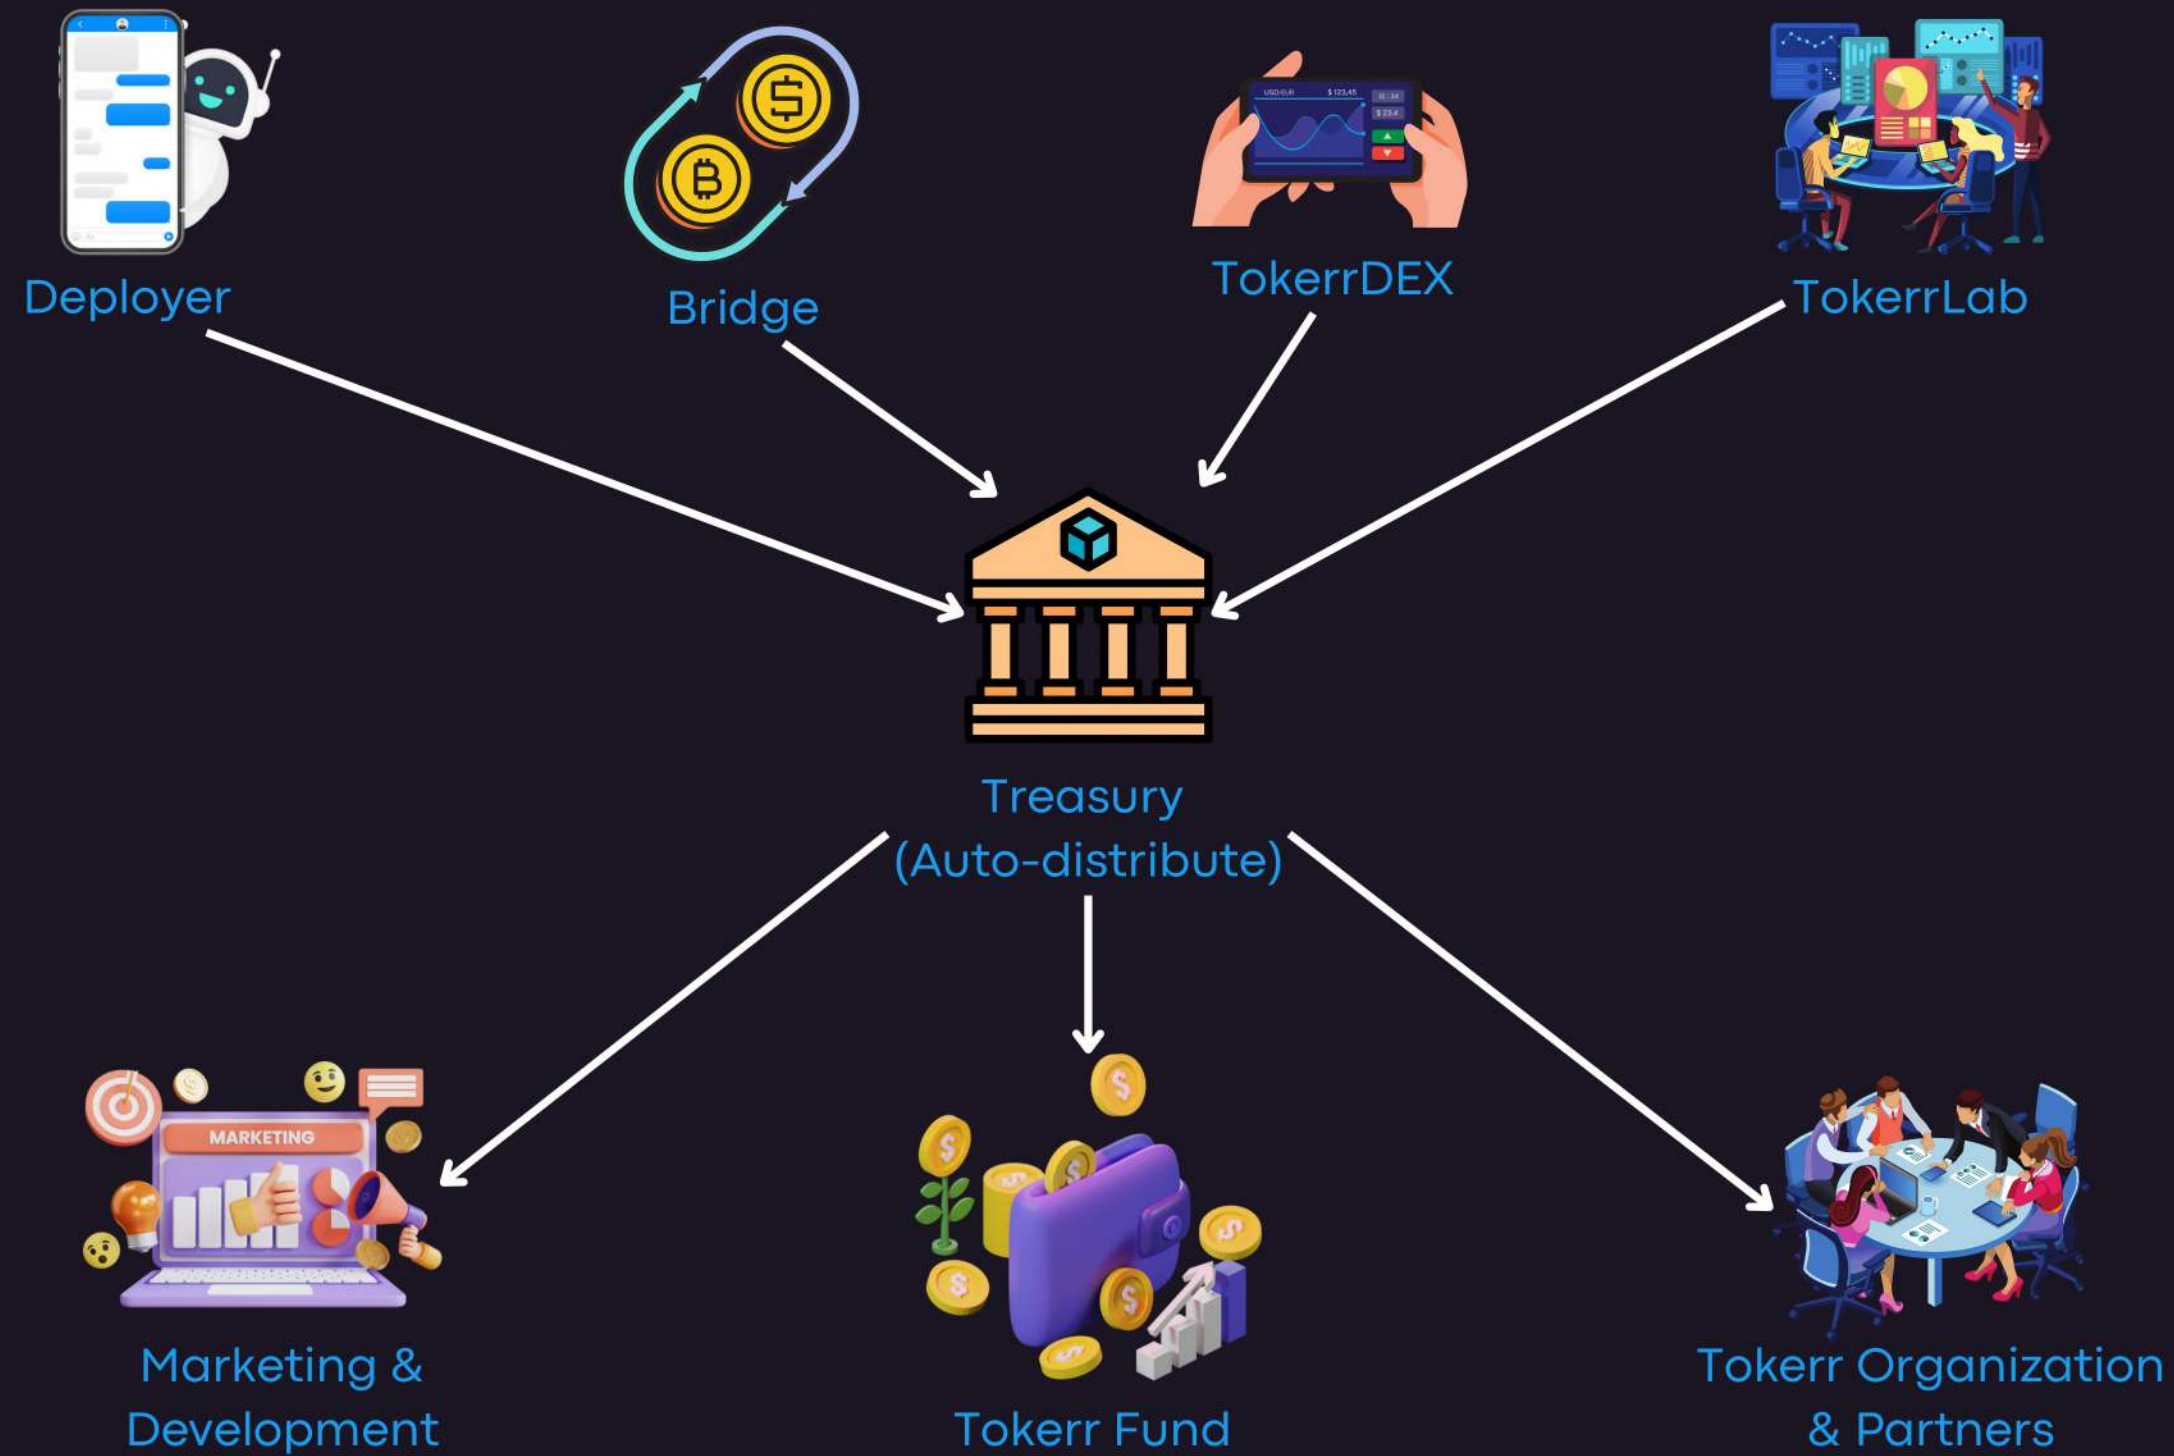

expected: Q4 2023

Changing the way crypto projects are built

Development Map

Phase 2
- Updates to Tokerr Deployer
- V2 Website and Whitepaper
- List on CoinMarketCap
- Begin building Tokerr Bridge
- Launch Tokerr Deployer for Ethereum
- Launch Tokerr Bridge
- UI design for TokerrLocker
- UI design for TokerrDEX
- Begin building TokerrLocker

Phase 4
- Begin building TokerrDEX
- Begin Building TokerrLab
- Launch Deployer for ZKSync*
- Launch Deployer for Base*
- Launch Deployer for other high-volume chains*
- Release TokerrDEX
- Release TokerrLab modules in phases
- CEX listings

Phase 5
- Launch TokerrDEX
- Launch TokerrLab module-wise
- Continued innovation and improvement to existing utilities
- Planning and ideation on further utilities

Phase 1
- Launch Beta Deployer for BSC
- V1 Website and whitepaper
- Launch Deployer for BSC
- Launch the Tokerr Deployer Channel

Phase 3
- Migrate to Ethereum
- Partnerships & Growth
- Launch Deployer for Arbitrum
- Launch Deployer for Polygon
- UI design for TokerrLab
- Release Lockerr
- Release Holderr
- Launch Deployer for Shibarium*
